

METRIDEX
PREMIUM SECURITY
FOR DIGITAL ASSETS

Metridex — Multichain DeFi Intelligence

Privacy-Preserving DeFAI Risk Layer for the Oasis Network (Sapphire)

Problem

DeFi markets expose users to opaque risks:

- unsafe smart contracts
- unlocked liquidity and rug-pull vectors
- upgradeable proxies
- spoofed domains and fake project websites

Oasis Network is building a privacy-first DeFi and DeFAI ecosystem, but practical, user-facing risk tools around new tokens and pools remain fragmented and opaque.

Solution

Metridex provides a unified risk-inspection engine:

- Telegram-native QuickScan bot (@MetridexBot)
- On-chain inspection, LP-lock analytics, domain checks
- Actionable report delivered instantly in Telegram

Perfectly aligned with Oasis and Sapphire: Telegram-first UX, multichain coverage and actionable, privacy-preserving risk snapshots around DeFi activity.

Product (Live Today)

- QuickScan — one-tap token intelligence
- Deep HTML reports — for due diligence
- Multichain coverage: Ethereum / BNB Chain / Polygon / Base
- LP-lock insights, upgradeability detection, domain spoofing alerts

Key Metrics

Metric	Value
Chains	Ethereum / BNB Chain / Polygon / Base
Oasis Status Target network for DeFAI risk layer	Sapphire integration planned under this grant
Typical response	≈20 seconds pipeline
LP Insights	Enabled

Metridex — Oasis / Sapphire Integration Roadmap

Why the Oasis Network Grants Program (Sapphire / DeFAI)

Oasis Network is building a privacy-first DeFi and DeFAI ecosystem where users and protocols need clear risk signals before they interact with new tokens and pools.

Metridex brings a Telegram-first, multichain QuickScan experience that can route traders and projects towards safer DeFi on Oasis.

By combining Oasis Sapphire's confidential smart contracts with our DeFAI risk engine, we can surface actionable risk insights while keeping sensitive logic and partner data private.

Oasis / Sapphire Integration (Planned)

Phase 1 — Sapphire Risk Layer (Foundation)

Deploy core risk-scoring contracts on Oasis Sapphire for tokens and pools.

Wire Metridex QuickScan bot to support Oasis tokens and pairs (first-class network in the UI).

Align token metadata and liquidity sources for Oasis DEXes within our QuickScan pipeline.

Phase 2 — DeFAI Risk Overlay for Oasis DeFi

Build a lightweight DeFAI risk-snapshot widget for tokens and pools on Oasis.

Provide simple green / caution / high-risk verdicts based on LP locks, holders, contract age and domain intel, computed via Sapphire.

Experiment with pre-trade warnings and "Scan with Metridex" flows inside Oasis-native dApps and dashboards.

Phase 3 — Ecosystem Expansion & Tooling

Offer white-label or "powered by Metridex" DeFAI risk modules for Oasis wallets, launchpads and Telegram channels.

Ship shared analytics dashboards showing the "State of risk on Oasis" (aggregated risk across tokens and protocols).

Add watchlists and alerts focused on Oasis users and high-volume Oasis tokens.

Current Traction

- Live production bot with multichain intelligence (Ethereum, BSC, Polygon — ready to extend to Oasis Sapphire).
- Full QuickScan pipeline: on-chain, LP-lock, domain intel.
- Deployed on Render with uptime monitoring.
- CRM-ready activation and growth funnels.
